

Developing a Greenhouse Gas Protocol for Restored and/or Avoided Drainage of Wetlands in Agricultural Landscapes: Phase I

2015 CIG Funded Project
Lead: Billy Gascoigne

"This material is based upon work supported by the Natural Resources Conservation Service, U.S. Department of Agriculture, under NRCS Conservation Innovation Grant

Key Objectives

- “ Organize a expert working group—GHG dynamics, wetland hydrology, GHG markets and protocol development, others.
- “ Partner with CSU’s GHG Management & Accounting program to summarize existing science, identify science gaps, and speak to protocol potential
- “ Make recommendations to USDA about the potential for the sector.....if positive, seek funds to build modular protocol
